The Challenge

El Camino Health was navigating the same financial pressure facing hospitals across the industry. Different departments had different transportation needs and ordering habits. That complexity made it hard to see where small adjustments could create meaningful improvement.

The Partnership

Royal approaches transportation differently. Instead of treating it as a standalone service, we work alongside hospital teams to understand how it supports care, throughput, and financial performance.

We joined El Camino Health's leaders in reviewing real workflows, comparing processes across departments, and identifying where small, coordinated changes could create outsized impact. Every improvement was built together and integrated into the way El Camino Health already operates.

01

Smarter Transport Ordering

Eliminating waste at the point of order

1

Staff Education

Educated staff on medical necessity for BLS transports, so that orders matched actual clinical need.

2

Process Redesign

Shifted ordering responsibility from SNFs back to hospital teams, reducing confusion and misrouted requests.

3

RN-to-RN Protocol

Created and conducted additional RN-to-RN education and a quick-reference sheet to ensure ALS vs. CCT transports matched patient needs.

02

Better Payor Identification

Recovering revenue hiding in the billing data

1

Insurance Verification

Added insurance check-ins throughout the patient stay and proactively flagged "uninsured" cases prior to discharge.

2

Account Recovery

Reviewed and corrected misclassified accounts, recovering reimbursement that would otherwise have been written off.

3

Documentation & Training

Identified documentation gaps, delivered targeted staff training on accurate form completion, and implemented a structured follow-up process to correct errors and prevent future billing issues.

The Results

ENTERPRISE SPEND REDUCTION

100% FY 2024 76% FY 2025

↓ 24%

reduction in transportation spend across the enterprise

PATIENT BILLING ACCURACY

Significantly decreased patient overcharges

Increased patient billing accuracy through corrected MD PCS form processes, targeted staff training, and a structured follow-up workflow to prevent future errors.

COST CENTER ACCOUNTABILITY

Stronger accountability & clearer visibility for leadership

Clearer visibility into cost centers lets leadership respond faster and more decisively to transportation spend trends.

"By partnering with Royal, we not only cut costs but also improved accountability across departments. Their team helped us prevent overcharges, secure reimbursements, and keep the focus on patient care. That combination of financial discipline and community impact is rare."
